M Adithya Sagar

+91 63031 26957 | Gmail | linkedin | Github

Profile

Motivated and innovative computer science student with a strong foundation in artificial intelligence (AI), web development, and software engineering. Proficient in Python, Java, SQL, and the MERN stack, with experience in building and optimizing AI-driven applications and web solutions. Skilled in creative problem solving and team collaboration, delivering impactful results in dynamic project environments.

Education

KL University — Hyderabad, India
B.Tech in Computer Science and Technology (AI Specialization); CGPA: 7.77/10 — *June 2022 – May 2026*

Gowtham Junior College — Hyderabad, India
Intermediate (Mathematics, Physics, Chemistry) — *June 2020 – May 2022*

Technical Skills

Programming Languages: Python, Java, C

Web Technologies: HTML, CSS, MERN stack

Tools & Frameworks: Git, REST API, Web Scraping, Django

AI/ML Specialization: NLP, Transformers, LLMs, Deep Learning, ML, Computer Vision, Neural Networks

Databases: MongoDB, MySQL, Firebase, Supabase

Languages: English (Fluent), Telugu (Native), Hindi (Intermediate)

Projects

AI Mental Health Chatbot | *Python, LSTM, Streamlit* — GitHub

- Built a Seq2Seq mental health chatbot using LSTM trained on counseling conversations.
- Integrated NLP steps like tokenization, embedding, padding, and attention mechanism.
- Deployed using Streamlit for real-time chat and emotional support.

Flashcard Generator from PDF using AI Summarization | *React, FastAPI, Transformers* — GitHub

- Developed a web app to convert PDFs into flashcards using Transformer-based summarization (Hugging Face).
- Frontend in React with interactive UI; backend in FastAPI for efficient processing.
- Designed for students to quickly revise large documents through concise AI-generated summaries.

Soundbased | *Python, Librosa, SoundDevice* — GitHub

- Developed a real-time voice command recognition system using TensorFlow, Keras, and Librosa, classifying commands like “go”, “stop”, and “left”.
- Integrated microphone input and MFCC feature extraction to process 1-second voice samples for accurate prediction.
- Built an interactive Streamlit UI where a character moves based on spoken commands, blending machine learning with a playful visual interface.
